## EmTech Release Process

Doc-id: EMT0032

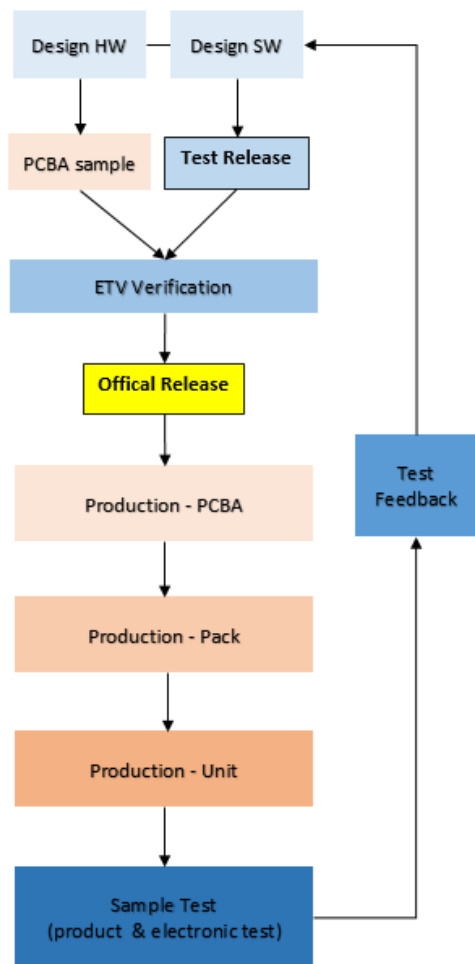

## Case 1

Problem: We need to release non-verified designs

Question: What is the proper way to handle this deviation from CM point of view?

Process clearly say we need to test before release but this does not always work because of ...

	Holiday	EmTech HW	EmTech SW	ETV	HeT	BMZ	Chunju
		Shanghai	Shanghai	Shanghai	Shenzhen	Shenzhen	Suzhou
W31						FOT	
		Design HW update -based on PCBA FOT -w/o FOT Test Feedback	Design SW Update w/o FOT Test Feedback

## Case 2

### Problem:

- Rev D is in production (released in Teamcenter), Rev E under update (not released)
- Difference D->E is updated Layout (PCB) and updated component values (BOM) – HW update only
- Alternative components requested for Rev D by supplier but Teamcenter does not allow update until Rev E is released
- Rev E is blocked by pending prototype build, pre-series and long test time until it can be released.

### Question:

What is the best way to handle this kind of deviation that is not supported by PLM system, from a CM perspective?

Input – We cannot change Teamcenter setup, Supplier request BOM to be updated or production will stop, All alternative components are verified and approved by Electrolux. MASA audit will look at this...
